NEW ZEALAND

RE: Application for Staff Engineer

Dear Sir/Madam,

I am excited to apply for the position of Staff Engineer at hha that's advertised on Seek. With over six years of experience in software engineering, an AWS Certified Solutions Architect Associate credential, and a strong background in Computer Science, I have developed a comprehensive skill set that aligns well with this role.

At Spark New Zealand, I currently lead the development of the API for the Spark app. My role involves collaborating with mobile developers and integrating server-driven UI widgets through RESTful APIs using Node.js. My experience at Invenco Group further solidified my backend skills as I migrated legacy Java code to Node.js and contributed to a multi-tenant SaaS platform managing payment processing devices. My mentorship of junior team members was a particularly rewarding aspect of this role.

During my tenure at Crimson Education, I leveraged React, Node.js, Terraform, and Docker to overhaul the company's marketing website, significantly improving performance by reducing page load times by over 60%. Additionally, I led the development of a serverless application on AWS, automating the migration of Zoom recordings to Google Drive, which reduced operational costs by 80%.

I am particularly drawn to hha's commitment to financial empowerment to everyone. The opportunity to solve complex problems, establish best practices, and drive technical excellence aligns perfectly with my career aspirations. I am eager to leverage my expertise in JavaScript, TypeScript, AWS, and various other technologies to contribute to hhagoals.

Please find my resume attached for further details on my qualifications. I look forward to the opportunity to discuss how my background, skills, and certifications make me a strong fit for this role.

Sincerely,

Sicong Jiang
