Job Application for Software Engineer

Dear Sir/Madam,

I am writing to express my interest in the position of Software Engineer that was recently posted on Galanta website. My over 6 years of experience as a software engineer, along with qualification as a AWS certified solutions architect associate and my education in Computer Science, have allowed me to attain a strong foundation of technical skills.

Currently, I am a node.js developer at Spark New Zealand where and is responsible for Spark mobile app. In this role, I worked with mobile developers and deliver new features using server-driven UI widgets delivered through RESTful API written in Node.JS. Before joining Spark, I was a full stack developer at Invenco group where I worked on a AWS hosted multi-tenant SaaS platform that manages payment processing devices. I led the effort in migrating legacy Java code to NodeJS and mentored junior members of the team.

Prior to joining Invenco, I worked at Crimson Education, I was able to utilize React, NodeJS, Terraform and Docker to revamp and deliver the new marketing website for the company. This reduce the page load time by over 60%. In addition to front-end work, I also lead the effort to build Serverless lambda application on AWS that migrates Zoom recording videos to Google Drive automatically, reducing the cost by 80%.

I also have a passion for maintaining high quality code and frequently make contributions to open source software. As a solution-oriented person and avid learner who thrives in challenging, fast-paced environment, I believe my strong background and passion in software development makes me an ideal candidate for this role.

Please find attached my resume for your review and I look forward to speaking with you further regarding your available position.

Sincerely,

Sicong Jiang
